Leader Line  
made of  
fluorocarbon

## INVISIBLE IN THE WATER

Normal lines reflect UV rays which allows them to be seen by fish. FLUOROCARBON lets UV pass through, not reflecting them off. FLUOROCARBON is unnoticeable by fish. A lot of fisherman around the world use flouro as a leader and achieve great results.

## FLUOROCARBON DOESN'T LOSE DURABILITY

FLUOROCARBON doesn't absorb water even after 100 hours in the water. Most lines absorb 10% water after 24 hours which weakens it by 5-10% of its original durability.

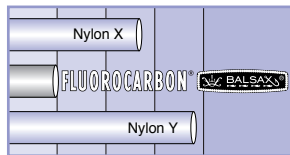

## FAST SINKING

FLUOROCARBON is over 50% thinner than ordinary lines and 78% thinner than water. This is why this material is used for fishing line.

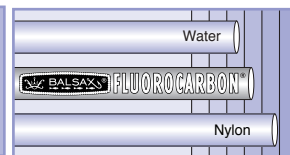

## HIGH RESISTANCE

FLUOROCARBON is more abrasion resistance than ordinary lines. FLUOROCARBON works best between -40°C to +160°C.

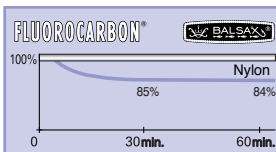

PROPERTIES OF FLUOROCARBON

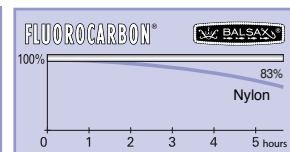

Three times sinking speed of nylon

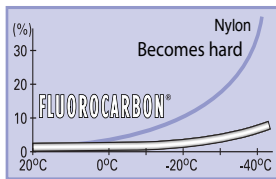

Light refraction close to that of water

Comparison of impact strength in water

Comparison of tensile strength in water

Cold resistance test

## BINDING OF FLUOROCARBON

Lubricate knots with water or saliva before drawing tight

100% resistance of the fishing lines on proper knots

Line immediately sinks on impact with the water.

Low memory's superior casting and trouble-free performance.

# NEW QUALITY OF LINES

## REVENTON N°1 PREMIUM

## BALSAX N°1 PREMIUM MONOFILAMENT

Special angling techniques need special line characteristics - be stretch colour, load capacity, transparency of softness.

By using optimally compatible raw materials and processing techniques, Balsax is offering a broad range of fishing lines- for hobby and game fishing

as well as tried and tested grades for the competition angler

# NEONCOLOR

- 0,70mm 44,7kg
- 0,75mm 47,1kg
- 0,80mm 49,3kg

The new molecular structure of **Tarantula** gives it greater tensile strength with a good amount of stretch.

These great qualities give you a great deal of confidence when you hook a big fish. **Tarantula** should be on the pedestal of its own. You should never worry about the line snapping even when fighting big fish.

The stretch quality of **Tarantula** works as a shock absorber to protect your line from snapping. Both these assets are perfectly matched together to guarantee the line will never fail you.

The camouflage grey color allows **Tarantula** to go virtually undetected under water.

- 0,75mm 47,1kg
- 0,80mm 49,3kg

**Iguana** fishing line is designed for strong-toothed fish that fight till the end. It combines strength and elasticity and fully satisfies the most severe criteria issued by the most demanding anglers.

**Iguana** absorbs sudden pulls of fish because it stretches without breaking, which allows to take total con-

trol of the fish.

All notches, cuts and scratches are fatal to a fishing line because in those places the line breaks most easily.

**Iguana** contains copo-lymers which entirely prevent the line from those shortcomings.

- 0,70mm 44,7kg
- 0,75mm 47,1kg
- 0,80mm 49,3kg

High performance fishing line is made on the basis of nanotechnology and it is perfect for the float method. Thanks to the unique, rainbow coloration the fishing line has different colors depending on the angle of incidence of light. This allows to

adapt to the aquatic environment, and makes that the line does not disturb the fish. NANO has virtually zero memory, and its elasticity and resilience allow for long throws and smooth tying of knots.

- 0,75mm 47,1kg
- 0,80mm 49,3kg

Line designed primarily for spinning. Thanks to the invaluable properties of nanoparticles it has all the necessary features essential for this fishing method. Thanks to the smooth surface limiting frictions it easily unwounds from the reel and allows for very long throws. It

has a high tensile strength and on the node, as well as low memory and no tendency to twisting and tangling. Limited stretching allows to feel specific movement of bait and cushion sudden jerks of the fish. Dark color imitates the color of the muddy bottom.

Owing to a special manufacturing process the **RXR Kameleon** color adjusts itself to fishing conditions. **RXR Kameleon** line is resistant to abrasion. Tests have shown it keeps its high resistance to stretching and its resistance of knots. It does not undergo deformation or torsion.

It has the capability of lengthening which gives it an exceptional sensitivity and maximum flexibility. The **RXR Kameleon** line is a reliable tow of a fish giving the possibility of feeling every movement of bait.

**Silver Fish** is designed for big game fish. This specific line provides superior knot strength when stretched and serves as a forgiving shock absorber when fighting big fish. **Silver Fish** is very smooth and provides superb casting. The super polymer technology allows it to be

more abrasion resistant, have a lower stretch factor, higher tensile strength higher impact and great shock resistance. The perfectly designed color of the **Silver Fish** line is ideal for all fishing waters you encounter.

### GOLD CARP

**Gold Carp** has great feel and is perfect for big fish. It has a high snap resistance and a controlled stretch.

**Gold Carp** has superior knot strength so you can haul in the biggest of carsp.

The honey gold color makes it perfect for fishing carp.

**Gold Carp** doesn't absorb water and is resistance to the sun's UV rays. Even after sitting in the sun for 800 hours.

### NANO CARP

**150m:** 0,18-0,45mm • 10 x 150m

**300m:** 0,55-0,80mm

**500m:** 0,40-0,80mm

**1000m:** 0,25-0,80mm

No memory line without a tendency to twist. It is designed not only to catch large specimens of carp, but also grass carp, big pike and catfish. It is covered with nanoparticles, which makes it even stronger and more durable.

Resistance on the knots, and high resistance to abrasion, result in possibility of long and effective fight against the big specimen.

## COLD WATER SOLUBLE LINE

**60 sec. 10m spool**

**60 sec.** is soluble in cold water.

It becomes soluble in 60 seconds.

**60 sec.** is perfect for fishing carp and also when fish aren't actively feeding.

Line immediately sinks on impact with the water.

Low memory's superior casting and trouble - free performance.

0,40mm	17,5kg
0,45mm	21,9kg
0,50mm	26,1kg

## FIRE

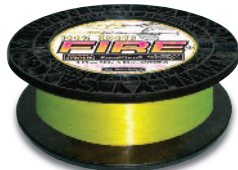

**Fire** has been specifically designed for spin fishing. **Fire** guarantee's longer cast and ultimate feel when finesse fishing. Thanks to specific parameters designed for spin fishing, **Fire** will come out straight off your reel keeping a very low memory cast after cast. **Fire's** design keeps it strong even under the sharpest of strikes and snags.

Giving you ultimate comfort and worry less of it snapping on you. **Fire's** super strength derives from its new technological production. Design by modifying standard lines and making them far superior in all aspects. **Fire** has been tested in all types of fishing situations and is ready for anything you cast it at.

## MANDRA

**Diameter MAX**

0,18mm	3,50kg
0,20mm	4,30kg
0,22mm	5,40kg
0,25mm	6,20kg
0,28mm	7,40kg
0,30mm	9,50kg
0,35mm	12,5kg
0,40mm	14,2kg
0,45mm	18,0kg

- 100m:** 0,18mm - 0,45mm  
 • individual box • 10 x 100m

**Mandra** is different from other fishing lines. It has contrasting colors yellow and black. The line is very strong and unbelievably visible above water. In developing this line we used the knowledge and experience of professional anglers and implemented new computer technology in the process of manufacturing.

**Mandra** allows you to fish in ways you could only dream about. Made up of yellow and black hi-tech copolymer it imitates the camouflage of a salamander.

**Mandra's** high visibility above the water allows you to control your bait perfectly. **Mandra** is superb for any type of fishing presentation you use and any weather conditions.

Diameter **MAX**

0,08mm	0,95kg
0,10mm	1,45kg
0,12mm	1,95kg
0,14mm	2,75kg
0,16mm	3,65kg
0,18mm	4,55kg
0,20mm	5,45kg
0,22mm	6,15kg
0,25mm	6,80kg
0,28mm	8,10kg
0,30mm	10,6kg

## BELUGA

 Diameter **MAX**

0,35mm	14,4kg
0,40mm	17,5kg
0,45mm	21,9kg
0,50mm	26,1kg
0,55mm	29,7kg
0,60mm	33,4kg
0,65mm	39,0kg
0,70mm	44,7kg
0,75mm	47,1kg
0,80mm	49,3kg

**Beluga** is the most modern monofilament available for anglers. Its special copolymer formulation guarantees super performance, reliable strength at knots, and, in addition, resistance to abrasive wear of the outer surface of the line. These qualities could be achieved owing to appropriate packing and

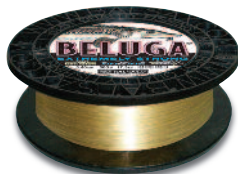

crystallisation of nylon molecular structures during the production process.

**Beluga** has a limited extensibility, and, therefore, it gives a signal as soon as fish touch it. It is not susceptible to damage or soiling. Owing to its properties it makes it possible to energetically tow strong fish.

**30m:** 0,08-0,25mm

• tube 10 x 30m

**100m:** 0,12-0,45mm

0,65mm	39,0kg
0,70mm	44,7kg
0,75mm	47,1kg
0,80mm	49,3kg

No longer do you have to worry about what type of line and color you need at the different type of water conditions you encounter. **Focus** has been developed to solve all these problems. This phenomenal line is crystal clear and ideal for any fishing situation.

This universal non - fading line is invisible even in the clearest of waters, making it unnoticeable by fish. This makes **Focus** superior to any other line. Another great aspect of **Focus** is its low memory which gives the angler a 100% effective cast every time.

Test shows that **Focus** has an ideal strength to stretch ratio that allows you to haul in the biggest of fish without worry. **Focus** is a fast sinking line. It sinks immediately when it hits the water and stays perfectly straight, throughout.

## BALSAX Nº1 PREMIUM MONOFILAMENT FISHING LINE FROM COPOLYAMIDE 6/6.6

This series is specifically designed for ice fishing. They are designed for very low water temperatures. These lines work at even -40°C where other lines harden and lose their strength.

The line is coated in a way to keep it from freezing and stiffening like conventional lines. Ideal for ice fishing and super strong even in the smallest diameters.

Lubricate knots with water or saliva before drawing tight

**100% KNOTS** 100% resistance of the fishing lines on proper knots

**SINKING** Line immediately sinks on impact with the water.

**LOW MEMORY** Low memory's superior casting and trouble-free performance.

New technology allows Balsax weights to be super soft. They clamp onto your line very easily and can move up and down your line easily while not causing any abrasion to your line. The case is marked precisely with the weight of one piece in each compartment. It allows you to quickly grab as many as you need in any size for the kind of fishing you are doing.

MATCHMIX Lead is the complex product. MATCHMIX appeared in our assortment to satisfy different expectations of fishermen. The newest technology ensures the high quality of lead, and also very precise maintaining of the constancy of mass even in the smallest elements. Because of the high degree of softness it corresponds to world standards.

The ergonomic design allows you to comfortably hold the container in your hands. The design allows you to easily access the individual weights no matter how small they are or how frozen your fingers may be. Its deep cuts allows it to stay securely on your line, even under heavy casting action.

MATCHMIX is produced in such a way that it is amazingly easy possible to fasten on the fishing line, independent of its size, in also the time its optimum hardness guarantees reliable fastening. With the new quality of lead the ergonomic form of box remains constant. It is easy to add pellets to the rigging.
